Identity verification memory — fixed 512 MiB native pool, 4 GiB JS heap limit
Size scaling: five reads per process
R² = 0.9999
1M held-out error = -1.1%
Peak process RSS (MiB)
Nodes (thousands)
Fit through 524,288 nodes
Median and range (3 processes)
1,048,576 nodes: normal GC
Sampled peak RSS per read (MiB)
Consecutive verification
Previous array probe
New production reader
Longer identities: 65,536 nodes
Peak process RSS (MiB)
Total ID + name + path bytes (MiB)
